PROFESSIONAL SUMMARY

IT professional with more than 8 years of experience, the last nearly 4 as a Data Analyst at Múltipla TI, serving clients in retail, services, technology and transportation. I use Power BI, advanced Excel, SQL and Microsoft Fabric to structure data collection from internal and external sources and deliver dashboards and performance indicators. I also prepare the monthly integrity reports for the Oracle databases of clients running high-availability environments and automate routines with n8n and Selenium. I have worked on assignment at a client and collaborate closely with development, database and business teams, always starting by understanding the process, the data and the challenge of the people who will use it. M.Sc. candidate in Computer Science at CEFET/RJ, with coursework in statistics.

SKILLS

Power BI: end-to-end dashboards for Múltipla's clients and for GSilva's truck fleet, with Power Query, DAX, star schema modeling, Direct Lake and scheduled refresh

Advanced Excel: XLOOKUP, SUMIFS, pivot tables and Power Query to clean the spreadsheets many clients still use as a data source, and for Fabric consumption analysis, which I did in spreadsheets before automating it (Senac course)

SQL and databases: Oracle for the monthly integrity reports; SQL Server, PostgreSQL and T-SQL for queries, data modeling and alert automation

SAP and ERP: extracting and processing ERP data for inventory control and management reports; currently studying SAP S/4HANA, focusing on the MM (materials) and PM (maintenance) modules and on connecting SAP HANA to Power BI

Microsoft Fabric and Azure: layered lakehouse, data pipelines and capacity administration in production; Azure Functions and Azure DevOps; AZ-900 and DP-900 certifications

Office 365 and Microsoft Office: SharePoint, Teams and OneDrive, with Microsoft Graph API integration to save reports straight to SharePoint; Word and PowerPoint

Process automation: n8n, Selenium (browser bots) and webhooks in workflows running in production, such as the automated alert checks

Statistics and prediction: statistics coursework in my master's, Pearson correlation and an attrition risk score in the People Analytics project, Python

Generative AI and development: RAG and agents in production with Node.js, TypeScript, Azure Functions and PostgreSQL with pgvector; React with MSAL, Redis, Jest, Sentry, LangSmith, Puppeteer and Git; Three.js and Arduino in my master's

PROFESSIONAL EXPERIENCE

Múltipla Tecnologia da Informação Ltda · Rio de Janeiro, Brazil Feb 2023 to Present

Data Analyst

Múltipla has its own platform built on Microsoft Fabric and sold to corporate clients. I serve several clients at the same time, often in back-to-back meetings on the same day.

Data collection and integration

- Structure data collection from internal and external sources, such as Oracle, SQL Server and PostgreSQL databases, REST APIs, the Microsoft Graph API and spreadsheets, and organize it all in Microsoft Fabric with a medallion architecture (bronze, silver and gold), ETL/ELT pipelines and star schema semantic models on Direct Lake.

- Manage Fabric capacities in production for multiple clients, with governance and access control separated by client.

Dashboards, reports and KPIs

- Build Power BI dashboards and reports end to end, from connecting the sources to publishing with scheduled refresh. Before building, I talk with the client's team to understand the process and what management needs to track.
- On assignment at GSilva, a trucking company, built a dashboard on telemetry from the trucks' onboard computers, crossing diesel consumption with coasting performance by driver, vehicle and route. Fleet management started making decisions based on data.
- Investigate slow reports and models and guide the fix. In one case, a client was processing 1 billion rows with incorrect data handling.

Databases and operations support

- Prepare the monthly integrity reports for the Oracle databases of clients running high-availability environments.
- Support the development team and the database team in monitoring the health of databases and environments (development, beta, staging and production) with Zabbix and Grafana, and help handle incidents.

Analysis, prediction and in-house solutions

- Created the Microsoft Fabric Capacity Analyzer, now in production. It reads Capacity Metrics exports, reproduces Fabric's own smoothing and bursting calculations and recommends the right capacity, from F2 to F2048, based on actual consumption. It also flags memory conflicts between models that refresh at the same time and generates an executive PDF report, ready to present to the client and saved straight to SharePoint. It replaced manual spreadsheet cross-checking and saved at least 20 hours of analysis.
- Run generative AI solutions in production with RAG and agents on LLMs, monitoring every execution with LangSmith and Sentry, and work with the development team on the platform's AI module.

Process automation

- Automated monitoring alert checks with n8n. Every 10 minutes the workflow queries the database, cross-references two PostgreSQL databases and notifies the team with the likely cause, processing clients in batches to avoid overloading the database. It ended manual investigation.
- Automate operational routines and integrations with n8n, Selenium and webhooks. For the code I ship, I use automated tests (Jest), version control with Git and Azure DevOps, and controlled promotion across environments.

Clients, training and teamwork

- Ran the technical side of client POCs alongside the project manager, from the second meeting to the close: provisioned the environment, trained the client's team and optimized queries before handing the client back to sales. Later trained a junior analyst to take over this work.
- Delivered many modeling and optimization trainings to clients, from fact and dimension tables and star schemas to reducing capacity consumption and migrating from DirectQuery to Direct Lake.

LMG Bonfim Serviço e Apoio Administrativo Ltda · Rio de Janeiro, Brazil Dec 2017 to Jan 2023

IT Support Technician

- Built operational reports and KPIs from internal system data, used by the management of several stores for decision-making.
- Provided technical support to store users and IT tools, including the integration of POS systems and remote infrastructure, and prioritized tickets with a focus on critical incidents.

Inbrands S.A. · Rio de Janeiro, Brazil Aug 2015 to Dec 2017

Administrative Assistant

- Extracted and processed ERP data for inventory control and recurring management reports, and supported asset maintenance and basic IT support.

EDUCATION

M.Sc. in Computer Science

CEFET/RJ, Federal Center for Technological Education Celso Suckow da Fonseca (PPCIC) · **In progress, expected completion in 2028**

Research line: TinyML, machine learning on low-power devices. The program includes statistics courses, which I use in my research.

Courses: Robotics Applications (**A, 10/10**) · Research-Oriented Study (**A, 10/10**) · Scientific Methodology (grade pending) · Internet of Things, IoT (in progress) · Analysis of Algorithms (in progress)

Postgraduate Degree in Data Science and Artificial Intelligence

UNISUAM, Augusto Motta University Center · **Completed in Dec 2025**

Undergraduate Degree in Systems Analysis and Development

UNISUAM, Augusto Motta University Center · **Completed in Dec 2024**

PROJECTS

People Analytics: turnover prediction

see portfolio

Power BI, DAX and the Central Bank of Brazil API · personal project with simulated HR data

Star schema model with 10 tables and 49 DAX measures. It combines HR data with real economic indicators (Selic rate, IPCA and INPC inflation, unemployment), pulled from the Central Bank of Brazil API on every refresh, and calculates an attrition risk score per employee, with a simulator for actions such as promotions, training and raises. I validated the calibration month by month with Pearson correlation: -0.59 between turnover and unemployment.

Hybrid Ground Robot with 3D simulation

rafaelpinto1.github.io/cefet-robotica

M.Sc., Robotics Applications course · grade A, 10/10

Robot that follows a planned 3-meter path and avoids obstacles in real time, using a hybrid architecture based on the AuRA model. I built it with an Arduino Uno, an L293D motor driver, motors with optical encoders and 4 ultrasonic sensors, without a ready-made kit, and published the 3D simulation in Three.js.

Agricultural robotics with computer vision for coffee crops

M.Sc., Scientific Methodology course · literature review co-authored with Professor Helga Balbi

Review of autonomous platforms that monitor crops before harvest, with computer vision detection (YOLO and Faster R-CNN). It showed that part of the initial hypothesis had already been addressed by a group at ESALQ/USP and narrowed down the real gap: classifying ripeness with autonomous navigation, before the harvest decision.

Microsoft Fabric series on LinkedIn

linkedin.com/in/rafaelpinto1

I publish a content series about Microsoft Fabric. I presented the Capacity Analyzer in a carousel and a video, with a sample report built on simulated data, available in my portfolio.
